

The plot shows a function $f(x)$ with a periodic, wave-like structure. The x-axis is labeled 'x' and ranges from 4206.5 to 4208.5. The function is represented by a dense orange line and blue dots. The function has a central peak at $x \approx 4207.5$ and two side peaks at $x \approx 4206.5$ and $x \approx 4208.5$. The function is periodic with a period of approximately 1.0 unit. The function is symmetric about $x = 4207.5$.
